**Demonstration.** Built from synthetic data.

How did September 2024 go, and can we rely on the numbers?

# Behind budget, and the numbers are provisional.

EBITDA was USD 182k against a budget of 305k, mainly G&A costs and price. On the current forecast the year ends 291k short of budget. Net debt to EBITDA has 7% headroom.

**USD 182k**
EBITDA, 123k below budget

**USD 3.15m**
full-year forecast

**2.32x**
leverage, limit 2.50x

## Decisions needed

| | DECISION | WHO | BY WHEN |
|---|---|---|---|
| 1 | Clear the 4 open close checks so the pack can be issued as final | Financial Controller | Before the board pack goes out |
| 2 | Close overdue action A-01 or set a new date | Sales Director | This month |
| 3 | Decide whether to reforecast or to act on costs to recover the shortfall | CFO | Next board meeting |
| 4 | Tell the lender early if the downside case looks likely | CFO | This quarter |

The evidence is in the pack; the explanations are in the variance sheet; the lender's copy is the covenant certificate.
