Executive summary

Demonstration pack. Built entirely from synthetic data generated by ProQuant for illustration. The company, its customers, its bank and its figures are fictitious.

Provisional. The close is not complete: Every account is in the chart; Receivables agree with the ageing; Ledger cash agrees with the bank; Budget for every account. Figures may still move.

This is the September 2024 management pack of Demo Client, produced by ProQuant Analytics from the month's trial balance. It shows the P&L for the month, the year to date and the last twelve months against budget and last year, why EBITDA differs from budget, cash and working capital, the bank covenants and a rolling forecast of the year. The trial balance was checked (11 checks) before anything was calculated. The commentary is drafted from the numbers and reviewed by the analyst; the budget holders explain the variances in the variance sheet.

Status of the pack: PROVISIONAL

7 close checks passed, 4 warning(s), 0 failure(s) for September 2024. FINAL: every check passed; PROVISIONAL: figures may still move at the close; HOLD: do not use or send.

Limitations and assumptions

- The pack is only as good as the trial balance; the close checks detect imbalance, unmapped accounts, missing accounts, reconciliation differences and implausible months, not a wrong posting that looks plausible.
- The commentary states what changed and where; it does not explain why. The budget holders and the analyst notes add the explanation.
- The cash flow is derived from the balance sheet movements (indirect method); it is not a substitute for a statutory cash flow statement.
- The forecast is a transparent run-rate method, not a bottom-up reforecast; one-off items are excluded by configuration. Covenant calculations follow the definitions in the table and must be agreed with the lender's agreement.
- Price and volume effects need units by product; without them the bridge shows a single revenue step.
